这些成果离不开大模型的辅助，AI加速了我的方案迭代。

科研范式的根本转变

传统范式 – Traditional Paradigm

全新范式 – New Paradigm

AI是强大的助手，但不是万能的。核心创新，仍在我们自己。

■ ■ ■ ■

第一步：文献收集-高效入门一个新领域

搜索领域 + 'Survey'

利用AI辅助分析，人类把关

聚焦分支，深入探索

Briefing Document: Cultural Awareness in Language Models: Text and Beyond

Purpose: This briefing document reviews the main themes and key findings from a collection of research papers and articles focusing on cultural awareness in language models (LMs), encompassing various modalities like text, vision, audio, and video.

Key Themes:

1. Cultural Bias and Representation:

- Existing LMs are heavily biased towards Western, Educated, Industrialized, Rich, and Democratic (WEIRD) societies. This is reflected in their performance on tasks requiring cultural knowledge, with superior results on benchmarks related to Western cultures compared to others.

- This bias stems from the overrepresentation of English language data and uneven data of data from various regions (Pawar & Par

Culture-Specific Benchmarks

Culture-Specific Benchmarks in section 4.2.2 concentrate on commonsense knowledge particular to a certain culture or region. The sources provide several examples:

- Indonesia:** IndoCulture uses a sentence completion task in a multiple-choice format. It assesses cultural knowledge across 11 Indonesian provinces and covers 12 topics like local customs and knowledge. [1]
- COPAL-ID** is based on the COPA (Choice of Plausible Alternatives) format, evaluating causal reasoning. It captures local cultural nuances in standard Indonesian and Jakartan Indonesian. [1, 2]
- Leong et al. created a cultural diagnostics dataset with native speakers to evaluate basic cultural knowledge in Indonesian and Tamil, covering language, literature, history, and customs. They use free-form generation prompts and qualitative analysis. [1, 2]

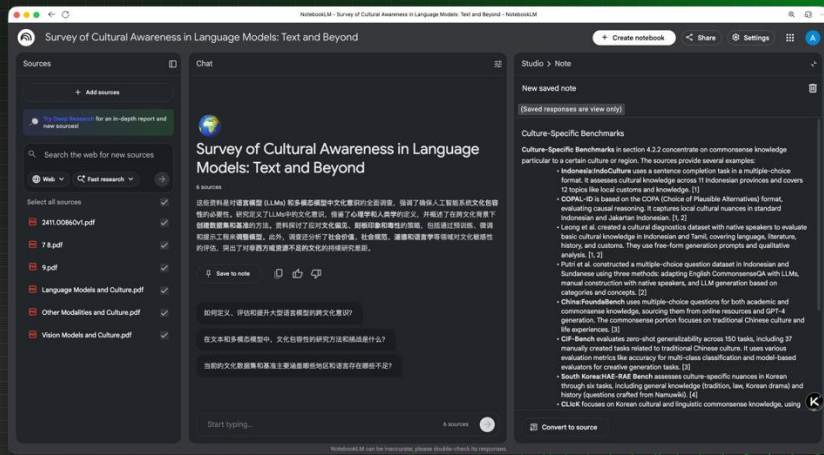

别直接问AI “这个领域是啥” ——结果片面，易产生幻觉。

关键问题：从综述中挖掘研究方向

- 领域的核心任务与研究类型？
- 当前存在的主要痛点是什么？
- 关键工作的递进关系与固有缺陷？
- 主流数据集、评估指标和SOTA结果？

案例分析：

例如，在价值观对齐研究发现，现有评估忽略了价值观偏好的概率分布特征。

推荐工具：

NotebookLM, 上传PDF, 快速生成总结与洞见,

第二步：缺陷分析-深入问题的本质

方案构建：交叉学科的创新力量

痛点	交叉方案	效果
模型缺乏“人性化”思维	引入心理学认知模型，模拟人类决策过程	性能提升10%，增强泛化能力

1 查重：
AI联网搜索相似工作。

2 构建：
明确步骤、逻辑、预期提升。

3 规划：
设计基线、对比模型、指标。

第三步：代码实现 – 善用开源，高效迭代

Llama-Factory

模型微调首选，避免从零开始。

✓ 配置合理

Weights & Biases

日志可视化与实验追踪

✓ 日志可追溯

✓ 数据备份

实验与分析：在循环中逼近成功

EMNLP 25的实验初期准确率没有提升？分析发现额外的文化领域的修正阶段引入了噪声问题，删除后解决。

清晰地解释你的提升：为什么有效？认知增强是如何让模型更“人性化”的？

第四步：论文写作 – 人类规划，AI润色

研究背景：社会调研能够反映人类的思维过程，决策依据，为社科研究提供洞见。使用AI驱动的模拟实验能够大大降低人工成本.....

核心创新点：融合心理学理论的跨文化价值观调研模拟系统。

关键技术：心理学理论建模，多阶段推理，决策加权整合.....

实验结果：个体模拟准确率提升10%，模拟价值偏好的概率分布于人类差异减少.....

未来展望：更多心理学理论、更多文化、更多模型.....

人类角色

思路逻辑通顺，完成论文初稿。

Social surveys are essential for generating insights and supporting decision-making processes in research, yet traditional human-centric experiments often incur significant costs...

In this paper, we focus on improving cultural value survey simulation by incorporating psychological theory into the modeling of human responses.

MARK draws on the MBTI personality type dynamic theory to model cognitive functions and their interactions with stress ...

AI角色

内容串联、论证深度、表达的精炼。

总结：成为驾驭AI的科研者

范式已变：AI是科研新基建。

工具赋能：掌握从文献到实验的全流程AI技巧。

人类核心：批判性思维与创新洞察力无可替代。

行动起来，你的科研将事半功倍！
